We accept cash, medical aid, debit, credit and selected retail cards. Medical aid clients will be requested to produce their medical aid and ID or passport. Basement parking available in Lilian Ngoyi (Bree) Street.

ADVANTAGES OF OFFICE-BASED SURGICAL PROCEDURES

There are many benefits to office-based procedures, but sometimes patients and clinicians may not understand what the benefits entail.

1. Confidentiality

Our multidisciplinary medical and dental centres offer privacy and confidentiality for our clients. Nobody will ever know the reason for your visit since we offer many other services under one roof. We also provide executive/VIP rooms at an extra cost if required.

2. Pain Free

All our procedures are performed under sedation/anaesthesia at no extra cost so that our clients do not feel any pain.

3. Lower risk

Compared to procedures in the operating room, office-based surgeries do not have the same risks associated with general anesthesia. Patients are often pleasantly surprised at just how comfortable they can be with local anesthesia or conscious sedation/anaesthesia; and a typical patient can even drive himself/herself home immediately after the procedure without any nausea or drowsiness.

While all surgery carries a risk for infection, office-based procedures are also typically done outside of a hospital setting, so the risk of wound infections with hospital-acquired superbugs is thought to be lower.

4. Lower cost

In addition to the safety benefits of office-based surgery, we are living in a time when patients are asked to absorb more and more of their healthcare costs. Because office-based surgery does not often have facility or hospital fees, and does not have separate general anesthesia fees or fees based on time spent occupying an operating room, it is often considerably less expensive to the patient, the insurer, and the healthcare system.

In most cases your co-pay for an office based procedure is a small fraction of what it would be in a hospital.

5. Accreditation

Ideally, office based procedures should only be performed in an accredited office. Specifically, any procedure that requires more than minimal sedation/anaesthesia must be accredited. To achieve accreditation, it is a requirement to put in place the necessary developing protocols, policies procedures and accredited training.

OFFICE SURGICAL PROCEDURES PERFORMED
